Introduction

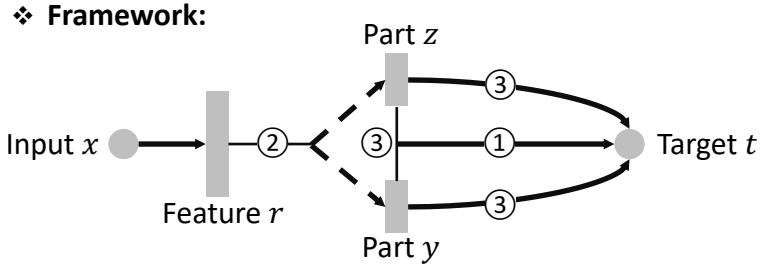
- **Representation Learning** aims to make the learned representations more effective on extracting useful information from input for downstream tasks.
- **Diversified Representations** are learned with different information constraints which encourage representation parts to extract various and useful information from inputs, which results in powerful features to represent the inputs.
- **Information Competing Process** (ICP) for learning diversified representations.

Framework

- **Mutual Information:**

$$I(x,y) = \iint P(x,y) log \frac{P(x,y)}{P(x)P(y)} dxdy$$

- **Framework:**



Key Idea

- **Information Competing Process:**
  ① Unify supervised and self-supervised objectives.
  ② Separate and diversify representations.
  ③ Competition of representation parts.
- **Objective of ICP:**

$$max\ [\underbrace{I(r,t)}_{①} + \underbrace{\alpha I(y,x) - \beta I(z,x)}_{②} + \underbrace{I(z,t) + I(y,t) - \gamma I(z,y)}_{③}\ ]$$

Experiments

- **Supervised Setting** - Classification Task.
